Somendra Pal Gupta

Frontend Developer | Full-stack Engineer

+91-7024469977 | somendragupta13@gmail.com | LinkedIn | GitHub | Gurugram

PROFILE SUMMARY

Frontend-focused Full-stack Engineer with 4+ years building React and TypeScript applications for pharma and e-commerce clients including ZS Associates and Eli Lilly. Delivered 30% faster UI builds and 25% load time reduction. Skilled in Redux state management, Jest and React Testing Library, REST API integration, and CI/CD with GitHub Actions and AWS.

TECHNICAL SKILLS

Languages: TypeScript (Strict Mode), JavaScript (ES6+), Java, C++
Frontend: React (Hooks, Context API), HTML5, CSS3, Responsive Design, Next.js, Tailwind CSS, shadcn/ui, MUI/Material UI, Redux, DOM, Frontend Architecture
State Management: Redux, Context API, Redux Thunk, Redux Slices, Middleware, Reducers, Selectors
Web Performance: Core Web Vitals, Code Splitting, Lazy Loading, Webpack, Babel
Testing & Quality: Jest, React Testing Library, Unit Testing, ESLint, Code Review
Collaboration: Agile/Scrum, UI/UX Collaboration, Cross-functional Teams, Mentorship
Atlassian: JIRA (Sprint Boards, Bug Tracking, Reports), Confluence
Backend & APIs: RESTful APIs, GraphQL, Node.js, Express, JSON Web Token, Spring Boot, FHIR
Databases: PostgreSQL, MongoDB
DevOps & Tools: CI/CD, Docker, Git, Jenkins, GitLab, NPM, Yarn

WORK EXPERIENCE

Frontend Developer *Jan 2026 - May 2026*

ZS Associates *Gurugram*

- Engineered data-driven, scalable React.js dashboards using Redux and TypeScript for AI analytics and omnichannel KPIs, serving 1,000+ sales representatives.
- Built a shadcn/ui + Tailwind CSS design system with typed TypeScript APIs and reusable, cross-browser React components aligned to web standards and DOM behavior; adopted by 3 teams, reducing UI build time by 30%.
- Architected scalable Redux state (slices, memoized selectors, Thunk) for multi-tab views and performance optimization, reducing unnecessary DOM updates and cutting dashboard load time by 25%.
- Enforced TypeScript strict mode with shared types, API response interfaces, and prop contracts, eliminating implicit any across the entire platform.
- Implemented secure client-side authentication patterns using JSON Web Token (JWT) for protected UI routes and API requests, ensuring consistent authorization handling across the app.
- Aligned frontend build and code quality practices using Webpack, Babel, and ESLint to support modern JavaScript/TypeScript workflows and enforce consistent linting standards.
- Guided code reviews on React performance, Redux patterns, and TypeScript correctness, sustaining zero critical defects each sprint.

Technologies Used: *React.js, Redux, TypeScript, Tailwind CSS, shadcn/ui, Redux Thunk, DOM, JSON Web Token, Webpack, Babel, ESLint*

Senior Frontend Developer *Sep 2024 - Dec 2025*

Brandconn Digital Group *New Delhi*

- Developed responsive web applications using React.js, TypeScript, Redux Toolkit, HTML5, CSS3, and Tailwind CSS; built a React + TypeScript storefront end-to-end (product catalogue, cart, checkout flow, order management) and deployed via AWS S3 with GitHub Actions CI/CD.
- Implemented and customized Material UI (MUI) component library to build reusable, accessible React components, reducing UI development time and ensuring visual consistency across the application.
- Authored reusable TypeScript component libraries (generics, discriminated unions) and implemented Redux reducers, actions, and selectors, reducing state-related bugs by 40%.
- Partnered with UI/UX designers to translate wireframes into pixel-perfect, cross-browser interfaces; upheld Jest and React Testing Library standards, achieving test coverage.
- Performed cross-browser testing and DOM-level debugging to identify and resolve UI defects, improving consistency across modern browsers.

Technologies Used: *React.js, TypeScript, Redux, RESTful APIs, Jest, React Testing Library, DOM, MUI, Material UI, CI/CD*

Frontend Developer *Jan 2024 - Aug 2024*

Screen Magic Mobile Media *Pune*

- Spearheaded Zoho CRM-integrated delivery using React.js, Redux, and TypeScript, shipping modular responsive components for 500+ enterprise clients.

- Introduced TypeScript strict mode (interfaces, enums, utility types) to eliminate implicit any and clarify component APIs across a legacy codebase.
- Refactored Redux store to Redux Slices, reducing redundant logic by 40% and improving data load speed by 20% through enhanced state predictability.
- Conducted code reviews enforcing React component standards and TypeScript safety, achieving zero critical post-release defects across 4 consecutive releases.

Technologies Used: *React.js, Redux, TypeScript, Zoho CRM, Redux Slices*

Software Developer *Dec 2022 - Dec 2023*

Brandconn Digital Group *New Delhi*

- Architected TypeScript-first React modules for a MERN e-commerce platform (cart, auth, filters) with shared types, serving 10,000+ users/month.
- Standardized UI across modules using TypeScript component patterns with strict props, shared interfaces, and reusable hooks for consistent cross-team development.
- Optimized Core Web Vitals via lazy loading, code splitting, and memoization, achieving sub-2s load times and reducing page load time by 35%.
- Mentored a UI team of 4 on React.js, Redux, and TypeScript best practices, reducing the quarterly defect rate by 25% across 8 zero-carryover sprints.

Technologies Used: *TypeScript, React.js, Redux, MERN, Core Web Vitals*

Software Engineer *Sep 2021 - Dec 2022*

Mphasis Ltd. *Bengaluru*

- Built scalable React (Hooks) front ends with Redux and TypeScript for a healthcare platform, supporting 50,000+ records across 3 hospitals at 99.9% uptime and cutting latency by 30%.
- Deployed 50+ TypeScript-typed chatbot flows using Microsoft Bot Framework and LUIS with strongly typed intent/entity models, automating 60% of manual query handling.
- Delivered a reusable React component library with TypeScript generics; improved accessibility to WCAG 2.1 AA and ensured responsive, cross-browser UI across 5 deployments.

Technologies Used: *React.js, Redux, TypeScript, Microsoft Bot Framework, LUIS, WCAG 2.1 AA, JIRA, Confluence*

EDUCATION

Bachelor of Technology (B.Tech) — Computer Science & Engineering *2021*

Jaypee University of Engineering & Technology, Guna | Guna

KEY PROJECTS

IDP (Integrated Data Platform) — Eli Lilly | ZS Associates

- Built a shadcn/ui + Tailwind design system with typed TypeScript APIs for NBA analytics and omnichannel KPI tracking, serving 1,000+ sales reps.
- Architected Redux state management (slices, memoized selectors, Thunk) for async data across multi-panel dashboards, improving real-time rendering speed by 25%.
- Enforced TypeScript strict mode with shared API interfaces and discriminated unions, adopted by 3 teams and cutting feature development time by 30%.

MTH — Healthcare Platform

- Developed a React + TypeScript UI for a FHIR-integrated healthcare portal with strict interfaces for Patient/Observation/Encounter resources across 3 hospital systems at 99.9% uptime.
- Implemented Redux for real-time clinical data flows using typed actions, reducers, and memoized selectors, reducing data latency by 30% through performance and API optimization.

Cricket Weapon — E-Commerce App

- Designed a modular TypeScript-first front end with shared types and Redux slices across cart, auth, and product filters, serving 10,000+ monthly users.
- Boosted frontend performance by 35% via code splitting and lazy loading, achieving top Core Web Vitals and sub-2s load times while onboarding 2 junior developers 40% faster.

Cognitive Guru — Chatbot Platform

- Deployed 50+ TypeScript-typed chatbot flows with LUIS intent/entity/response models across HR, Insurance, Banking, and Telecom, automating 60% of high-volume manual queries.
- Built a modular intent-processing architecture with reusable dialogs and strict typing, cutting domain onboarding time by 40% and reducing fallback responses by 35%.

SMS-Magic — Zoho CRM Enhancement

- Revamped Zoho CRM SMS-Magic integration using React, Redux, and TypeScript with standardized typed API interfaces and prop contracts, eliminating redundant logic by 40%.
- Applied TypeScript strict mode with discriminated unions and utility types to prevent runtime errors; led UI/UX alignment sessions to enforce consistent design patterns across the platform.

CERTIFICATIONS

- Google Cloud Fest Hackathon — 3rd Prize — Google Cloud / HackerEarth — 2022
- Claude 101 — Anthropic — Apr 2026
- Claude Code in Action — Anthropic — Apr 2026

AWARDS & RECOGNITION

- 3rd Prize — Google Cloud Fest Hackathon (presented by Google Cloud, powered by HackerEarth) — Built a Conversational AI + FHIR-integrated healthcare solution enabling natural-language clinical data exchange.
